Our message

To be the leading company in providing the best services in the field of fire extinguishing and fire alarm systems in terms of installation and products of excellent quality in accordance with the conditions approved locally and internationally.

Our vision

to be the ideal choice for protecting individuals and property in accordance with security and safety standards and protection from fire risks in various facilities and places in accordance with public and private places.

What distinguishes us?

Al-Bawariq Al-Arabiya Company provides various specialized and operational technical solutions for security and fire safety systems, such as making safety plans, supplying, implementing, supervising, consulting, and issuing safety certificates from civil defense, with the presence of a professional staff of engineers, technicians, and administrators at the highest level that supports customer requirements and the needs of their projects.

The work standards and systems we operate

We work in accordance with the requirements of the Saudi Building Code, Civil Defense conditions, and the standards of the American National Fire Protection Association (NFPA).

We also ensure that the systems and devices used are compatible with international and local standards and regulations, and that they are certified by an international laboratory according to civil defense guidelines, such as: (UL/FM/LPCB)

1

Supply and installation of fire extinguishing systems

A Automated sprinkler systems

It is represented by a network of pipes and parts used, such as grooves, welding, or threaded pipes of various diameters, control valves of all types, and sprinklers of various grades and types, and they are approved.

B Gas extinguishing systems

Extinguishing with clean gases (NOVEC.FM200).

Clean gas is one of the main fire extinguishing agents. It does not conduct electricity, evaporates quickly, and does not leave residues upon evaporation. It is broadly classified into two categories: halocarbon compounds and inert gases such as nitrogen and argon, or a combination of those.

Extinguishing with carbon dioxide gas

Carbon dioxide gas does not conduct electricity, and it extinguishes the fire by displacing oxygen. This is achieved by several mechanisms, such as comprehensive automatic dousing. This system is applied to areas devoid of people.

Kitchen extinguishing systems

Wet chemical fire suppression system is used to protect commercial kitchens from potential hazards such as open flames, hot cooking surfaces, and the environment that contains large amounts of grease, leading to oil, grease, and gas fires.

Foam extinguishing systems

Foam system

It is an integrated installation in which the concentrated foam is mixed with water in a foam mixing station, then the required foam is formed and sent in stalagmites from the foam production station and discharged through specific exits to the danger area that needs to be protected, with pumps permanently installed as required.

Fire boxes

It has one door or two doors, inside or outside the wall, and its quality is stainless or red.

Fire pumps

Supply, installation and operation of fire pumps according to their types and operational capacity according to the project requirements.

2 Supply and installation of fire alarm systems

We supply and install fire alarm systems for all facilities in the context of providing exemplary solutions in terms of designing their engineering framework, supplying alarm systems, and then installing and supervising them until final implementation.

3

Duct works and dust Suction

It is considered one of the most important requirements in architectural construction and one of the most important requirements of civil defense, as it must be taken into account in the design inside facilities and buildings, especially places where there is humidity due to the lack of natural air entry or its entry in small quantities.

4

Supply and installation of fire-resistant emergency doors

According to the Saudi code and civil defense requirements, emergency doors or fire-resistant doors have become essential in facilities, and no facility can obtain a license until after installing emergency doors.

Al-Bawareq Al-Arabiya Company provides the best services in supplying and installing emergency doors.

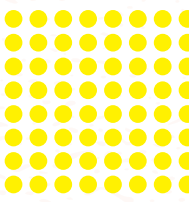

5 Technical and supervisory consultations

Design, review, implement and supervise plans and deliver them to civil defense.

6

Maintenance contracts

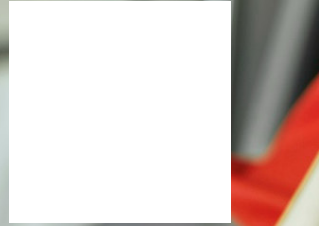

Maintaining the quality and adequacy of the systems requires specialists to take care of this for you, and we work to provide maintenance services for these systems if maintenance contracts can be concluded daily or annually. This gives you confidence in the equipment of these systems when you need them, in addition to that our maintenance team may be present at the sites if necessary.
